
Permutation feature importance for furfural yield
(Gradient Boosting surrogate; 15 repeats on the test set)
Reaction temperature
Residence time
Initial xylose concentration
System pressure
Catalyst class
Solvent system
Catalyst loading
Aqueous/organic ratio
Organic solvent identity
Bronsted/Lewis acid ratio
Salting-out NaCl concentration
0.0
0.2
0.4
0.6
0.8
Mean decrease in R^2 upon permutation of the descriptor
